## Understanding the Water Cycle

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Answer the questions below based on what you learned about clouds and condensation.

1. Water vapor cools and turns back into \_\_\_\_ droplets.

2. What is it called when water vapor turns back into liquid?

- A. Evaporation
- B. Condensation
- C. Precipitation

3. What did we observe in our cloud experiment?

4. Clouds form when water vapor condenses in the sky.

- True       False

5. What makes your bathroom mirror get foggy?

- A. Hot water
- B. Cold air
- C. Water vapor

6. God draws up the drops of water from \_\_\_\_ and distills them as rain.

7. Name one place where you have seen water droplets form.

8. Cooling makes water vapor turn into tiny droplets.

- True       False

9. How do clouds form?

- A. By heating water
- B. By cooling water vapor
- C. By mixing colors

10. Why is the water cycle an incredible design by God?

---

### Answer Key

1. liquid 2. Condensation 3. We saw water droplets form. 4. True 5. Hot water 6. vapor 7. On a cold drink or a window. 8. True 9. By cooling water vapor 10. Because it shows how water changes and supports life.
