Understanding the States of Water

Name: _____

Date: _____

Answer the following questions based on what you learned about the water cycle and God's design in nature.

1. What are the three main stages of the water cycle?

- A. Evaporation, Condensation, Precipitation
- B. Rain, Snow, Ice
- C. Clouds, Rivers, Oceans

2. Water changes states in the water cycle through ____, condensation, and precipitation.

3. How does the water cycle show God's amazing design?

4. Match each stage of the water cycle to its description.

Evaporation

Water falls to the ground as rain or snow.

Precipitation

Water turns into vapor and rises into the air.

5. What does Job 36:27-28 tell us about water in the sky?

- A. It is made of clouds.
- B. It is drawn up as vapor and distills as rain.
- C. It is always in the ocean.

6. The water cycle is a perfect example of God's ____ in natural systems.

7. Where do you see water changing states around you?

8. What is one way water can become a cloud?

- A. By freezing into ice.
- B. By evaporating from a puddle.
- C. By flowing into a river.

9. Match the water cycle stage to its action.

Condensation

Water vapor cools and forms droplets.

Evaporation

Water changes from liquid to gas.

10. Why is the water cycle important to our environment?

Answer Key

1. Evaporation, Condensation, Precipitation 2. evaporation 3. It shows how water is recycled perfectly in nature by His creation. 4. 0,1 5. It is drawn up as vapor and distills as rain. 6. design 7. I see it when rain falls and puddles form, and then the sun makes them disappear. 8. By evaporating from a puddle. 9. Water vapor cools and forms droplets. 10. It helps provide water for plants and animals, and keeps nature balanced.
