## Understanding Rounding and Estimation

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Answer the following questions based on the lesson about rounding and estimation.

1. What is the first step in rounding a number?

- A. Identify the place value to round to
- B. Look at the number's last digit
- C. Double the number

2. When rounding, if the digit to the right is \_\_\_\_ or greater, you round up.

3. Why might we use rounding in real life?

---

---

---

4. Rounding helps us understand large numbers more precisely.

- True       False

5. What does Luke 14:28 teach us about planning and estimation?

- A. To avoid building towers
- B. To calculate costs before starting something
- C. To ignore large numbers

6. Rounding helps develop our number \_\_\_\_ and estimation skills.

7. How can estimation help us solve problems quickly?

---

---

---

8. You should always round down if the digit to the right is 4 or less.

- True       False

9. What is one of the rounding rules mentioned in the lesson?

- A. Round down if 5 or greater
- B. Always round up
- C. Round up if 4 or less

10. What are the key steps to rounding?

---

---

---

---

### Answer Key

1. Identify the place value to round to 2. 5 3. We use rounding to make numbers easier to work with, especially when estimating costs or quantities. 4. False 5. To calculate costs before starting something 6. sense 7. Estimation allows us to make quick calculations without needing exact numbers, which can save time and effort in decision-making. 8. True 9. Round up if 4 or less 10. The key steps to rounding are identifying the place value to round to, looking at the digit to the right, and then deciding whether to round up or down based on that digit.
