10. What strategies do you use to think through challenging calculations? Describe at least two.

Answer Key

1. Estimating 2. True 3. gold 4. The most challenging part was figuring out the first digit of the quotient. It was hard to estimate correctly. 5. It makes them easier to solve 6. True 7. wisdom 8. Estimation helps by giving us a rough idea of the answer. For example, if we want to divide 85 by 12, we can estimate it is about 7 since 12 times 7 is 84. 9. Guessing the answer 10. I like to break the problem into smaller parts and also use estimation to check if my answer makes sense.
