## Understanding Living Systems

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Answer the following questions based on what you learned about teamwork in living systems.

1. What is the smallest unit of life in living systems?

- A. Organ
- B. Tissue
- C. Cell

2. Cells combine to form \_\_\_\_, which then create organs.

3. Explain how tissues, organs, and systems work together in the body. Why is this important?

---

---

---

4. If one part of a biological system stops working, it can affect the whole organism.

- True       False

5. According to 1 Corinthians 12:12, how do the members of the body relate to each other?

- A. They are all separate.
- B. They are all one body.
- C. They do not work together.

6. God's intricate design of cooperation in nature shows us how \_\_\_\_ work together.

7. How are cells like tiny workers in a big factory? Provide an example.

---

---

---

8. Organs are made up of cells and tissues working together.

- True       False

9. What might happen if a vital organ in the body stops functioning?

- A. The body stays healthy.
- B. The body may not work properly.
- C. Nothing happens.

10. In what ways does understanding teamwork in living systems help you appreciate God's design?

---

---

---

---

-----  
Answer Key

1. Cell 2. tissues 3. Tissues work together to form organs, and organs make up systems. Each part is important for the body to function properly. 4. True 5. They are all one body. 6. parts 7. Cells perform specific tasks just like workers in a factory. For example, some cells build tissues while others help protect the body. 8. True 9. The body may not work properly. 10. It shows how everything is connected and works together, reflecting God's creativity and wisdom.
