Understanding God's Creation

Name: _____

Date: _____

Answer the following questions based on the life science concepts we've studied this year.

1. What are some key cellular structures that you learned about this year? List at least three.

2. What is the relationship between different body systems?

- A. They work independently
- B. They interact and depend on each other
- C. They have no connection

3. An ecosystem consists of only the plants and animals in a specific area.

- True False

4. Psalm 139:14 reminds us that we are ____ and wonderfully made.

5. How does understanding life science help us appreciate God's design? Provide an example.

6. Which of the following best describes ecosystem relationships?

- A. All organisms are isolated
- B. Organisms are interconnected and affect each other
- C. Only plants interact with animals

7. Body systems can function without any interaction with other systems.

- True False

8. Cellular structures perform specific ____ that are necessary for life.

9. What surprised you most about how living things are connected? Explain in a few sentences.

10. What is an example of how two body systems work together?

- A. Digestive and respiratory systems
- B. Muscular and skeletal systems
- C. None of the above

Answer Key

1. Some key cellular structures are the nucleus, mitochondria, and cell membrane. 2. They interact and depend on each other 3. False 4. fearfully 5. Understanding life science shows us the complexity of living things, like how the heart and lungs work together, which reflects God's amazing design. 6. Organisms are interconnected and affect each other 7. False 8. functions 9. I was surprised to learn how plants and animals rely on each other for survival, like how bees pollinate flowers. This connection shows how everything in nature works together. 10. Muscular and skeletal systems
